

ENGINEERING FOR
PUBLIC ASSEMBLY

WALTER P MOORE

Services

Our primary services are: structural engineering, structural diagnostics, parking consulting, civil engineering, hydrology and hydraulics, transportation engineering, traffic engineering and research & development. Our engineers are experienced in secure design, sustainable design, Intelligent Transportation Systems (ITS), Building Information Modeling (BIM), CM-at-Risk and design/build.

Public Assembly

There is something about engineering places that bring crowds together that engineers find particularly satisfying. Certainly that's the case with us.

Attracting Crowds

Maybe it's because these places reinforce the concept of community and bring out the best of urban life's possibilities. Clearly, when crowds come together, for business or pleasure, barriers fall. *And that matters.*

Rethinking the Box

With annual revenues surpassing \$120 billion, the public assembly market is one of the nation's largest industries. Today's convention centers have the power to transform local economies, which is why so many smaller cities and towns have opted to build them. We've been part of this proliferation almost from the start, helping transform convention centers from yesterday's inelegant boxes into today's technology-infused, visual showstoppers.

In places as diverse as Boston, Massachusetts; Orange County, Florida; Overland Park, Kansas; Hartford, Connecticut; and San Juan, Puerto Rico, we have engineered millions of square feet of dazzling first-generation, structurally complex facilities—some comprising over two million square feet each—as well as additions to established facilities seeking to compete. And we've learned first-hand their impact, from the pride generated in San Juan to the long-term economic impact for a community.

Collaboration is essential to keep costs under control and to meet opening dates on these publicly scrutinized projects. But it can be done. Our design and construction team proved it with the *Boston Convention and Exhibition Center*, the largest building in New England and one of the top convention destinations in the country. It's a success model we bring to all our projects.

We have also collaborated with some of the world's finest architects on several highly acclaimed performance halls. While their scale and purpose are vastly different, both convention centers and performance halls do one thing very well: attract a crowd. We see big value in that.

What We Do

Founded in 1931, Walter P Moore is headquartered in Houston, Texas, with more than 375 professionals in full-service offices from coast to coast.

Our structural, structural diagnostics, civil, traffic and transportation engineers and parking consultants help clients turn their ideas into reality, from healthcare and education facilities to corporate campuses, airports, sports stadiums, convention centers, entertainment centers and urban roadway systems and other infrastructure. Our clients are architects, corporations, institutions, developers, government agencies and contractors. If all of our work with them were put together, it would form a vibrant city with every functional and discretionary amenity, great mobility, superior disaster protection and a plan for the future. A city that works because *our solutions work.*
