## Parking Feasibility Studies

Walter P Moore provides parking studies for a variety of clients across the country. Our studies focus on helping the Owners achieve their goals. Experience has shown Owners are dedicated to providing a parking experience with a high level of service for the end user while achieving budgetary goals and schedule.

Our studies maximize the parking asset's value by identifying the appropriate amount of parking spaces necessary to accommodate the current and projected needs of the project. This is accomplished by the implementation of our Balanced Design Approach which is developed to ensure that the Owner's goals are clearly identified, prioritized and met. Our extensive garage design experience is a valuable asset and a catalyst during the feasibility stage. We leverage our diverse team of experts to help the owner make informed decisions they can stand behind.
